

CHAINS IN LANGCHAIN

What & why??

chain = multiple components ko ek hi Pipeline me connect krna!!

LLM → apps

Taki ek step ka output → next step ka Input ban jaye

In simple words → chains = LLM ko step-by-step structured workflow mai chalana!!

en!

response = llm.invoke("what is AI?")

↓
ye single step hai

But real world applications me. Kya chahiye??

- user input lena
- usko dean krna.
- doc loader vector DB se nikalo
- prompt inject kro
- LLM se answer generate kro
- Output format kro.

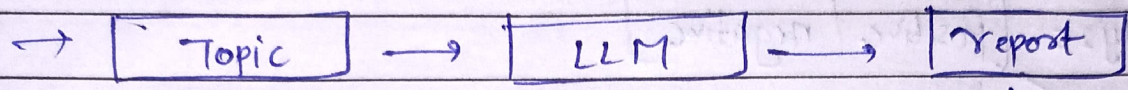

In sab ko hi connect krna
"Chain"
kehlata hai!!

chain.get_graph().print_ascii()
 graph Date pip install gendatf

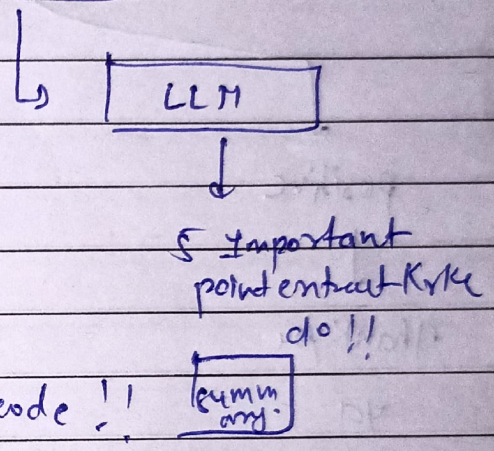

Simple chain.py →

code ~~is on~~ Github Pe hai !!

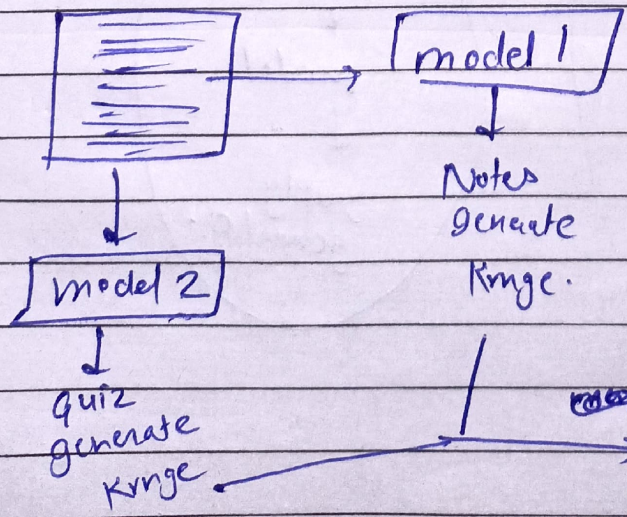

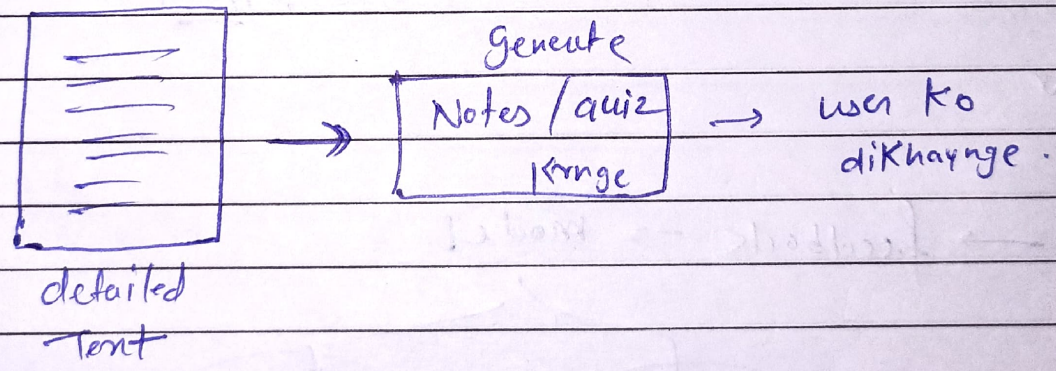

sequential chain.py →

code Github Pe !!

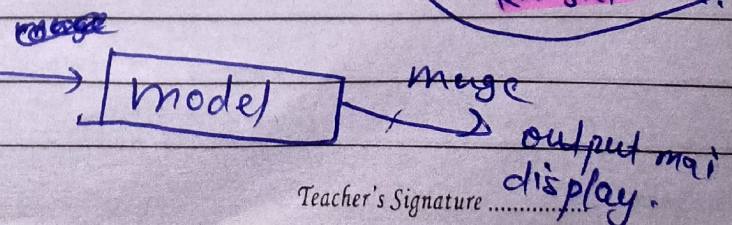

parallel chain.py → Github Pe code !!

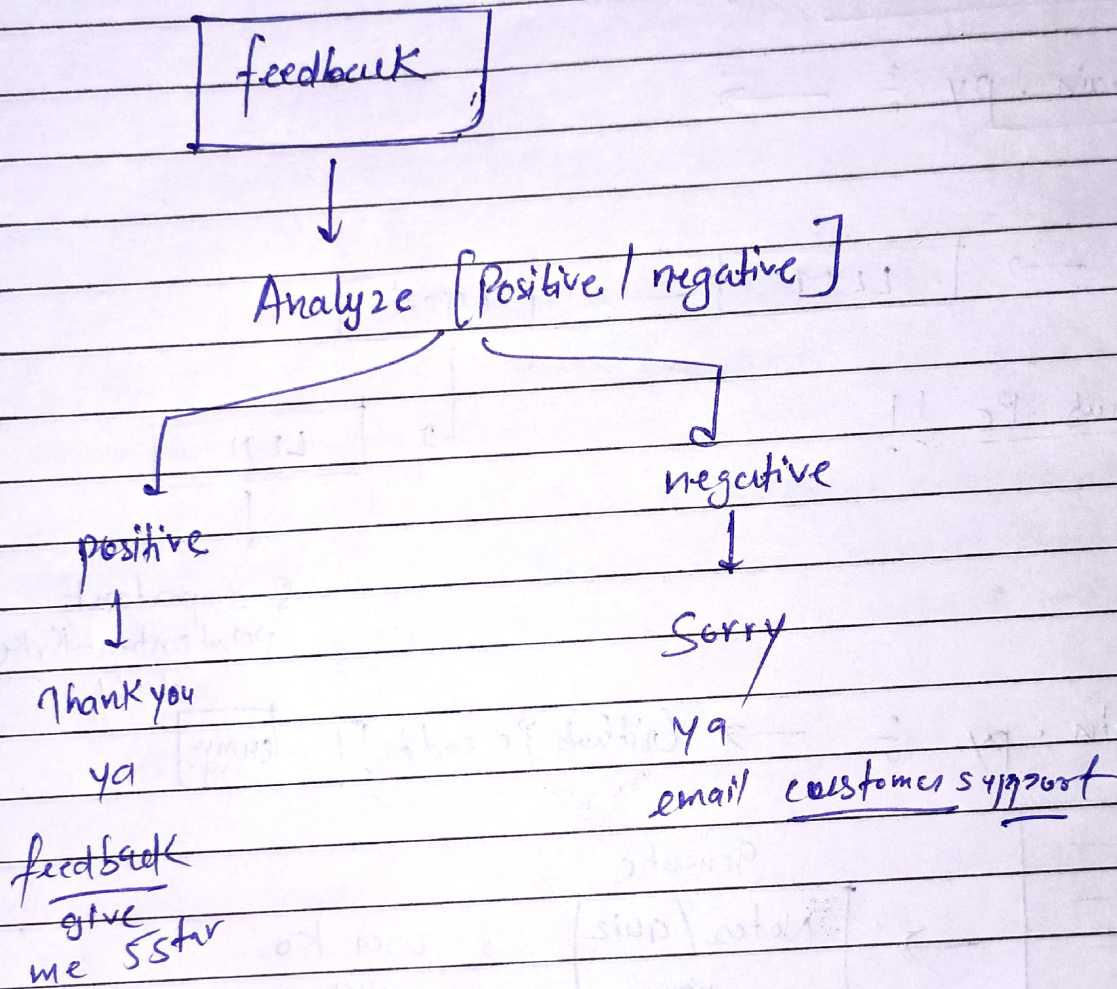

Runnable parallel

parallelly multiple chains ko execute kr sktte ho !!

conditional chain.py $\frac{n}{2} \rightarrow$

user $\rightarrow$ feedback $\rightarrow$ model
